

Cost Control

Easy to budget monthly payments. Interest rate fluctuations will not impact the monthly payment, rental is fixed, predictable and budgeted.

Credit Line Maintenance

Borrowing capabilities with your banks are not impacted. A lease is an off-balance sheet transaction and is not considered a loan. Therefore, it does not reduce your lines of credit. It also improves return on assets, liquidity, solvency, and other key financial ratios.

End of Lease Options

You have choices that ownership does not provide. You can purchase the equipment at the fair market value, return the equipment, or upgrade the equipment to the latest generation.

Tax Advantages

Lease rentals are a business operating expense. You can usually realize total expense deductibility, rather than just depreciation, as in an installment loan.

Obsolescence Avoidance

Lease terms can minimize your company's time commitment, making it easier to take advantage of emerging technology. The Lessor assumes the risk of obsolescence, not you. Leasing provides a low cost, flexible method of providing your most valuable asset, your employees, with the most productive tools available, thereby realizing a greater return on your investment in your employee.
